## Saudi Arabia's Rising Projects Market

Saudi Arabia is on the dynamic growth path. The kingdom is working on multiple options to reshape its economy and elevate its global influence.

The kingdom is moving ahead with the next phase of its economic diversification plan known as 'Vision 2030' and hopes to unveil its 'Vision 2040' as early as 2027, says Crown Prince Mohammed bin Salman.

At the core of the Vision 2030 programme, are a series of 'gigaprojects' valued at \$1.25 trillion that are driving growth, investment and job creation in the kingdom. These include the Neom future city, The Red Sea Project, Diriyah Gate, Qiddiya, Roshn and Al-Ula, which were announced in 2017. Others followed, such as King Salman Park, Riyadh Sports Boulevard, Jeddah Central and King Salman International Airport.

With close to \$1.8 trillion worth of projects in pipeline, Saudi Arabia remains the largest single projects market in the region and offers many new opportunities across sectors such as construction, renewable energy, advanced technology, transport, healthcare and aerospace.

Saudi Arabia has close to \$45bn worth of power generation projects in the pre-execution phase, other than nuclear power plants project. The kingdom has added an additional 2,100 MW of renewable energy to the grid, bringing the total capacity of installed renewable energy to 2,800 MW, marking a 300% increase in installed capacity. The production capacity of renewable energy projects under construction in the country exceeds 8 GW, with an additional 13 GW of renewable energy capacity in various stages of development across multiple projects.

Saudi Arabia is on track to achieve its goal to reduce carbon emissions by 278 million tonnes per annum (mtpa) by 2030. The kingdom aims to achieve an optimal energy mix for electricity production by having gas and renewable energy at approximately 50% each by 2030. When achieved, this will displace approximately 1 million barrels of liquid fuel currently used.

Saudi Arabia is making progress on the development of the \$8.4bn green hydrogen plant in NEOM. The kingdom is determined to become the world's largest centre for clean hydrogen production and export, with Japan being the first recipient of the its blue ammonia shipment. The kingdom plans huge investment into the oil and gas sector to increase its production capacity and upgrade existing infrastructure.

Saudi Aramco, the national oil company, plans to approve \$100bn in projects and expand its oil production capacity by 1 million barrels per day (bpd) to 13 million bpd by 2027, with most of the increase coming from offshore fields. Other big projects include the development of the Jafurah onshore unconventional gas field and expanding Aramco's Master Gas System, the estimated \$7bn plus Zuluf upstream scheme, and the Manifa offshore oil and gas field.

On the downstream side, the kingdom's petrochemical sector will see investments of upto \$600bn by 2030. Aramco has a significant pipeline of planned projects, including petrochemicals projects estimated to be worth up to \$200bn.

Aramco, and its petrochemicals producing subsidiary Saudi Basic Industries Corporation (Sabic), plan to establish 10-11 large mixed-feed crackers by 2030, as part of the global liquids-to-chemicals programme, which is projected to see investments of up to \$100bn and aims to convert 4 million bpd of oil production into high-value petrochemicals and chemical feedstocks.

The kingdom expects its long-term growth ambitions will advance further in 2024, by working more closely with private sector.

The kingdom plans huge investment into the oil and gas sector to increase its production capacity and upgrade existing infrastructure.

# Projects

## Saudi Aramco's Ras al-Khair Oil Terminal Upgradation Project

**CLIENT:** Saudi Aramco, Saudi Arabia

**STATUS:** Bids submitted

For Saudi Aramco's contracts related to upgrading the Ras al-Khair oil terminal in Saudi Arabia's Eastern Province, NMDC Energy of Abu Dhabi has emerged as the frontrunner.

NMDC Energy, which was previously known as National Petroleum Construction Company (NPCC), is the lowest bidder for tender numbers 114 and 115 under Aramco's Contracts Release and Purchase Order (CRPO) system.

Aramco is expected to issue the official contracts for the two tenders in January.

The combined contract value of CRPOs 114 and 115 is estimated to be around \$1bn.

The scope of work on CRPO 114 entails engineering, procurement, construction and installation (EPCI) of two topsides and jackets, manifold system and accommodation units at the Ras al-Khair terminal. CRPO 115 involves EPCI of a 56-inch subsea pipeline covering a distance of 15 kilometers between the Ras al-Khair terminal and the oil loading units.

## KAPP's Al-Zour, Al-Khiran IWPP

**CLIENT:** Kuwait Authority for Partnership Projects (KAPP), Kuwait

**STATUS:** Firms shortlisted

The Kuwait Authority for Partnership Projects (KAPP) has announced the shortlisted consortiums for the development of its planned Al-Zour North Phase 2&3 Independent Water and Power Project (IWPP) and the Al-Khiran 1 IWPP.

The shortlisted bidders are:

- Abu Dhabi National Energy (Taqa) of UAE / AH Al Sagar & Brothers of Saudi Arabia / Jera of Japan
- Acwa Power of Saudi Arabia / Gulf Investment Corporation of Kuwait
- China Power International Holding / Malakoff International of Malaysia / Abdul aziz Al Ajlan Sons and Company of Saudi Arabia

- Nebras Power of Qatar / Sumitomo of Japan

The contract scope involves the development, financing, design, procurement, engineering, construction, testing, commissioning, operation, maintenance and transfer of the IWPPs.

These projects are being implemented by KAPP in collaboration with the Ministry of Electricity & Water & Renewable Energy of the State of Kuwait (MEWRE).

KAPP and MEWRE are assisted by Ernst & Young as Lead & Financial Advisor, Addleshaw Goddard as Legal Advisor and Atkins as Technical & Environmental Advisor.

The Al-Zour phase 2&3 IWPP will merge the previously planned second and third phases, and will have a generation capacity of 2,700 MW and a desalination capacity of 165 million imperial gallons a day (MIGD).

The Al-Khiran 1 IWPP will have a power capacity of 1,800 MW and a desalination capacity of up to 125 MIGD.

## Hydrom's Green Hydrogen Projects

**CLIENT:** Hydrogen Oman (Hydrom), Oman

**STATUS:** RfQ issued

Hydrogen Oman (Hydrom) has issued the Request for Qualification (RfQ) for Oman's second land blocks' auction for green hydrogen project.

Last date to submit the Statements of Qualification (SOQ) is 28 January, 2024.

Hydrom first green hydrogen auction offers up to six plots of land on which it wants developers to build fully integrated green hydrogen projects — including renewable power supply, electrolyzer capacity and any associated infrastructure required to process the hydrogen into another product, such as ammonia and methanol.

The second round targets the auction of up to four land blocks, located in Thamrait (Dhofar Governorate).

To lead the country's ambitious green hydrogen strategy, the

government has established HYDROM, a fully owned autonomous subsidiary of Energy Development Oman SAOC (EDO).

Oman's national hydrogen strategy set a green hydrogen production target of up to 1.23 million tonnes per year by 2030. By 2050 it hopes to be producing up to 8.5 million tonnes per year. In total it will need around \$140bn in investment.

**Lukoil's West Qurna-2 Oilfield Development Project**

**CLIENT:** Lukoil, Iraq  
**STATUS:** EPC contract awarded

Lukoil has awarded the engineering, procurement, and construction (EPC) contract to SICIM of Italy for a gas processing project at the West Qurna (Phase-2) Oilfield Development.

The contract is worth \$619 million.

The contract scope includes a nitrogen unit and gas compression and drying facilities at the West Qurna 2 field.

The project is to be completed within 990 days.

**NGHC's NEOM Green Hydrogen Project**

**CLIENT:** Neom Green Hydrogen Company, Saudi Arabia  
**STATUS:** Subcontract awarded

A civil sub-contracting deal has been awarded to Emypro of Spain for the construction of green ammonia storage tanks as part of the Neom Green Hydrogen project.

The ammonia storage tanks will become the two largest in the world to store green ammonia for the production of electricity through hydrogen.

The contract for the tanks was awarded by Man Enterprise, who is the main contractor for a larger ammonia tanks project. The scope of the project includes:

- Construction of two ammonia storage tanks
- Construction of pumping station
- Construction of control room
- Laying of interconnecting pipelines and flowlines
- Infrastructure works
- Installation of surface facilities
- Construction of associated facilities

**OQ's Fahud-Sohar Loop Line Project**

**CLIENT:** OQ Gas Networks S.A.O.C., Oman  
**STATUS:** Bids invited

OQ Gas Networks S.A.O.C. ('OQ') has extended the bid submission deadline for the EPC Works for 42" Fahud-Sohar Second Loop Line project.

Bids are now due to be submitted by 31 January, 2024.

The firms pre-qualified to bid, include:

- Galfar Engineering and Contracting
- Gulf Petrochemical Services & Trading
- Kalpataru Power Transmission
- Oman Construction Company
- Target Engineering

The contract scope includes the construction of a new 42-inch pipeline from Fahud compressor station to Block Valve Station (BVS-06) with a total length of 193 km and Block Valve Station (BVS-04) with the length of 128 km; and connecting the new Loop line to Ibri IPP, ARA and Oxy spur lines

The new pipeline will run parallel to the existing 32-inch Fahud-Sohar Pipeline and will supply gas to the North Power station. The pipelines are a part of the Liwa Plastics Industrial Complex.

The project is scheduled for completion in Q3, 2026.

## KSA's New Phosphate Project to make it the World's 3rd Largest Producer

The Minister of Investment Khaled Al-Falih said that the Ministry is working on a new phosphate project, costing \$8.8bn billion, which will double the Kingdom's capacity of the product to become the third largest phosphate producer in the world.

Addressing the first ministerial session at the Northern Borders Investment Forum 2023 in Arar late last month, the minister said that the Kingdom will not only convert phosphate into fertilizers, but will also convert it into advanced chemical products, Al-Falih said.

The Saudi Economic Cities and Special Zones Authority (ECZA) is studying the prospect of linking the border areas and free zones with neighboring countries. He hoped that the border area with Iraq in Arar will be the first free economic zone with a neighboring country without taxes, fees, or entry visas in order to serve investors in both countries.

The Northern Borders Region includes 25 percent of the Kingdom's mineral wealth, with a total value of \$0.32 trillion. The Northern Border Region contains about 7 percent of the global phosphate reserve, and the volume of investment in it amounts to about \$22.6 billion in two stages. ■

## Masdar City Completes Region's First Net-Zero Energy Commercial Building

Masdar City, a sustainable urban community and a business and technology hub in Abu Dhabi, has just completed the region's first net-zero energy commercial building, called NZ1.

The building's simple design demonstrates that net-zero energy is possible for almost any developer, setting a new benchmark for architects and city planners worldwide.

"NZ1 is an incredible milestone for Masdar City," said Ahmed Baghoum, Masdar City's CEO. "Our vision has always been to accelerate the UAE's ambitious journey to net-zero, and we're closer now than ever. NZ1 is just the beginning. Through our distinctive approach to sustainability that prioritizes community needs, financial viability, and environmental protection, we demonstrate that sustainability is not a luxury for the elite—it's for everyone."

"Masdar City has been pushing the boundaries of sustainable development for more than 15 years," said Lutz Wilgen, Masdar City's head of design. "NZ1 is our most energy-efficient building yet, representing the best of what we have learned so far. Its aesthetic design is also one of the simplest in the city, showing that any developer can create a green building with the right tools and expertise. We're already working with other professionals who are hoping to replicate what we have done."

NZ1 is designed to consume 53 percent less energy than an equivalent conventional building. On-site PV (solar) panels will generate 101 percent of the building's annual energy needs, making it net-zero energy. Any excess energy produced will be fed into the Abu Dhabi electric grid.

Masdar City designed NZ1 focusing on passive design, an architectural technique that works with the local environment and a building's physical components to minimize the need for electric heating or cooling.

For example, NZ1 has a low window-to-façade ratio and uses window angling and shading to minimize direct sun

while maximizing natural light. The building envelope is airtight and uses top-notch insulation to keep heat out and cooled air in.

The award-winning building was constructed with locally sourced, sustainable materials wherever possible, and approximately 90 percent of construction waste was diverted from landfills. The building also uses low-flow water fixtures and appliances, and the landscaping requires minimal water. The building's total estimated carbon offset is calculated to be 550 kg CO<sub>2</sub> per m<sup>2</sup>.

NZ1, only the first of several net-zero energy projects underway at Masdar City, is on track to be rated LEED Zero Energy and LEED Platinum, the highest international green building certifications awarded by the U.S. Green Building Council. It is also on track to be rated Estidama 4-Pearl, Abu Dhabi's local green building rating system, and WELL Gold, which emphasizes the well-being of building occupants.

The lobby will be outfitted with a plaque that shows water and energy use as well as waste management and building experience data in real-time to help tenants adopt more sustainable practices. Data will be fed to a new digital control centre in Masdar City that will monitor building performance across the city. ■

### OETC Marks Completion of Phase 1 of 'Rabt' Project in Oman

Under the patronage of His Highness Sayyid Bilarab bin Haitham al Said, the Oman Electricity Transmission Company (OETC) celebrated the inauguration of Phase 1 of the strategic interconnection project 'Rabt' on Thursday, December 14, 2023 at the Oman Convention and Exhibition Center (OCEC).

The event was attended by a number of dignitaries including OETC's Board of Directors and the executive management of the company, representatives from Nama Holding, along with delegates from various government and private entities, as well as engineers, consultants, and contractors.

This project is considered one of the strategic and significant initiatives in the electricity sector, divided into two phases, with the first phase comprising 5 grid stations and 400 kV overhead transmission lines with a length of 660 km. The project aims to achieve several objectives, including enhancing the sustainability, availability, and reliability of the electricity transmission network throughout the Sultanate of Oman.

Additionally, it aims to reduce operational costs, contribute to carbon emissions reduction, improve economic growth, and attract foreign investments, aligning with the national goals of Oman Vision 2040 to enhance developmental progress in all fields.

It is worth mentioning that OETC, a member of Nama Group, is the only company responsible for the transmission and control of electricity across the Sultanate's network. The electricity is transmitted from production stations to distributed load centers in the governorates.

The transmission network operates at a voltage of 132kV and above to cover most of the governorates in the

Sultanate, whether in the north or the south. Furthermore, OETC manages the interconnection lines between Oman and the GCC interconnection network, which operates at a voltage of 220kV. ■

### Iran to Construct New Wind Farms with Capacity of 3,000 MW

The Iranian Government's Economic Council has approved a resolution for the construction of new wind power plants with the capacity of 3,000 megawatts (MW) across the country, according to the head of the country's Renewable Energy and Energy Efficiency Organization (SATBA).

Mahmoud Kamani said the funding for the construction of the mentioned power plants is going to be supplied by private sector investors and the government guarantees the purchase of the produced electricity.

According to the council’s resolution, the government guarantees the purchase of electricity from these wind farms for 4.5 years at a price of 9.5 cents per kilowatt, Kamani explained.

The electricity produced from these power plants can also be traded at Iran Energy Exchange, he said.

Referring to the technical specifications of the mentioned wind power plants, the SATBA head emphasized: “The technical specifications of wind turbines and other equipment of the wind power plants will be in accordance with the standards approved by the Ministry of Energy.”

The development of renewable power plants in Iran has accelerated since the current government administration took office in August 2021.

The Energy Ministry in the 13th government has defined new investment packages and strategies to attract more capital to fund new renewable projects across the country. According to energy experts, such investment models in the 13th government have been a good incentive for investing in this sector. The mentioned measures led to the capacity of the country’s renewable power plants reaching 1,085 MW, which is a very good figure.

Back in July, Kamani said the capacity of renewable power plants is increasing regularly and daily in the country. Putting the under-construction power plants into operation will further increase this capacity, Kamani said.

Iranian Energy Ministry has put it on the agenda to add 10,000 MW to the capacity of the country’s renewable power plants by the end of the current government administration (August 2025).

Earlier in April this year, the head of SATBA announced the construction of 110,000 solar power plants with a capacity of five kilowatts for low-income groups in the current Iranian calendar year (began on March 21). Kamani also announced that the tender for the construction of solar power plants with a capacity of 2,200 MW, left over from the plan for the construction of solar power plants with 4,000 megawatts capacity in the past year, will be also held this year.

Renewables account for nearly seven percent of the country’s total energy generation, versus natural gas’ 90 percent share.■

### Oman's Integrated Gas Company Appoints New CEO

Dr Aflah Al Hadhrami

The Board of Directors of Oman's Integrated Gas Company has appointed Dr Aflah Al Hadhrami as Chief Executive Officer.

Dr Al Hadhrami has an extensive track record of local, regional, and international experience in executive leadership within the oil and gas sector. With a professional career spanning over 28 years, he has held various executives, operational, technical, and commercial roles in multiple companies.

Before joining Integrated Gas Company, established by the Ministry of Finance in December 2022, he served as the CEO of Alshawamikh Oil Services company. Prior to that, he held leadership positions at British Petroleum, Occidental Petroleum Corporation, Schlumberger Limited, and Oman Oil Refinery Company.

Dr Al Hadhrami also holds leadership and chairs various boards and several memberships in various councils and committees across different sectors.

In addition to his extensive managerial experience and strategic mindset, he has a PhD in Business Management from the University of Liverpool, United Kingdom, and is a professionally licensed member of the Royal Chartered Institute of (MCIPS / UK).

Alongside his work in the oil and gas industry, he has served as an academic lecturer at the College of Economics and Political Science at Sultan Qaboos University.

The Board of Directors said it will rely on Dr Al Hadhrami's broad experience and leadership skills to achieve the company's goals and aspirations in the upcoming period.

Integrated Gas Company is a wholly-owned company by the Ministry of Finance, responsible for managing all allocations, assets, rights, and obligations related to the purchase, sale, import, export, and transportation of natural gas and related products on behalf of the Omani government under the license agreement granted to them.

### Bimal Dayal Appointed as CEO of Adani Infrastructure India

Bimal Dayal

Adani Energy Solutions' transmission business chief Bimal Dayal has been appointed as the CEO of Adani Infrastructure India. In a statement, Adani Energy Solutions Ltd (AESL) said that Dayal will oversee the implementation of the pipeline of infrastructure projects in thermal, renewable energy, and green hydrogen by Adani Infrastructure India.

The current management team of AESL led by Anil Sardana, Managing Director, and Kandarp Patel, who has been given charge of all verticals of AESL, will drive the ambitious growth of transmission, distribution, and smart metre segments. The leadership changes have been made to support enhanced growth of Adani Infrastructure business, the statement said.

"With this executive-level transition, the Adani portfolio of companies has taken another significant step towards strengthening their resolve to grow the infrastructure business at an aggressive rate of over 15 percent per annum. The portfolio recently announced its plan to invest over Rs 7000 billion over the next 10 years to consolidate its preeminent position as the largest infrastructure player in India," the statement said.

AESL, part of the Adani portfolio, is a multi-dimensional organization with a presence in power transmission, distribution, smart metering, and cooling solutions. It has a cumulative transmission network of 20,000 circuit km. It has a cumulative transmission network of 20,000 circuit km.

Before joining Adani's transmission business, Dayal was working as MD and CEO - Indus Towers Limited. In the past, he had worked with Qualcomm and Ericsson India in leadership roles. He holds a Bachelor's degree in Engineering – Electronics and Communication and has completed the Advance Management program from Harvard Business School.

## Bahrain

<b>► Tender Name</b>	Replacement of Raised Floor Tiles in Transmission Substations
<b>Country</b>	Bahrain
<b>Bid Bond</b>	BD 500
<b>Description</b>	The Tender Board of Bahrain has invited bids for the Replacement of Damaged Raised Floor Tiles in Transmission Substations. The Client is the Electricity and Water Authority. Complete tender documents can be obtained on payment of BD 15 from the e-Tendering portal at <a href="http://www.tenderboard.gov.bh">http://www.tenderboard.gov.bh</a> .
